Control iD

Access Control Software

iDSecure

The iDSecure solution, developed by Control iD, is a software that enables controlling the access of people and vehicles in companies of all sizes.

All management is performed via a web browser and is compatible with the main operating systems and devices (cell phones, tablets and PCs).

The platform enables the configuration of custom access rules and the generation of detailed reports to make your operation easier and more intuitive.

iDAccess

iDFlex

iDSecure

iDBlock

iDBox

iDAccess

- Customizable access rules
- Offline contingency mode
- 100% web, accessed by web browser
- Integration with cameras (CCTV)
- Real-time monitoring
- Customizable reports
- Modern interface

TECHNICAL SPECIFICATIONS

EASY TO USE

The iDSecure solution was developed with a focus on usability, making the experience of the manager and security professional as intuitive as possible. The local installation of the software combined with the 100% web interface allows the use of any device to manage access.

ACCESS RULES AND REPORTS

The configuration of complex rules based on companies, groups, schedules, types (visitor, third party, resident, etc.) combined with double-entry control, credits and even random searches, guarantee the system's compatibility with the most advanced security requirements.

CONNECTIVITY AND INTEGRATION

All Control iD access controllers (e.g., iDAccess, iDBox, iDFace and iDBlock) are natively integrated with iDSecure and can be managed easily. In addition, the system allows integration with CCTV cameras and card and/or biometrics registers for PC.

A VERSION FOR EVERY NEED

In the entry version of iDSecure (Lite), rules validation is done locally on the access control devices. In the Enterprise version, both identification and validation of rules takes place on the server, allowing an unlimited (depending on purchased license) number of users.

	iDSECURE LITE	iDSECURE ENTERPRISE
Validation of access rules	Equipment	Server
Biometric identification	Equipment	Server
Number of users	2000	Unlimited* *(depending on purchased license)
Quantity of equipment	5	Unlimited* *(depending on purchased license)
Release in contingency mode (offline)	2000 biometrics and 200,000 cards	2000 biometrics and 200,000 cards
Remote registration of biometrics and card through the Software	✔	✔
Real-time monitoring	✔	✔
Panic alert and blacklist	✔	✔
Visitors control	No	✔
Complex access rules (double-entry, credits, etc.)	No	✔
